

Social Sciences and Humanities (SSH) play a crucial role in the management of epidemics. They enable us to understand the social and cultural dimensions of diseases, which are essential for an effective response from healthcare systems. This MOOC has been designed by an interdisciplinary team. You will explore qualitative methods in SSH, their application in the context of health emergencies and the associated methodological and ethical challenges.

This MOOC will provide you tools to help you mobilize scientific data for appropriate healthcare interventions. Through case studies, you will discover how SSH contributes to the management of epidemics such as HIV, Ebola and COVID-19. We will also discuss the importance of interdisciplinarity in the management of these health emergencies. Drawing on lessons learned from previous epidemics, we will discuss strategies for improving the response to future health crises.

AT THE END OF THIS COURSE, YOU WILL BE ABLE TO:

- Demonstrate the contribution of SSH to the response to epidemics
- · Master the key concepts of qualitative research in SSH applied to
- Understand the ethical and methodological challenges of qualitative research
- Choosing the right methods for producing data in the context of a health emergency
- Discover approaches for maximizing the impact of research.
